

Regularity Stages: (Time Trials or PC's)

[PC = Prove Cronometrate]

The key to success in PC trials is hitting the exact time over each line.

A big help is establishing a consistent time and technique for the last 10 metre zone.

These stages are all about hitting the exact time for each trial.

- There are more than 70 of these on the rally and they are timed within 1/100 of a second.
- This is where the regularity rally is won and lost.
- The key is to accurately drive these short sections, between 40 and 400 meters long in exactly the correct time.
- Typically you are required to travel approx. 10-30km/h.
- There are typically 2 – 4 of these in a row and they are positioned in car parks, ovals and where roads can be closed to ensure public traffic do not drive through them and affect the timing.

Generally, there will be marshals to direct you into the time trials.

The penalty for not being exactly on time is 1 point per 1/100th of a second

Average Speed Tests: (MAS or PM's)

[PM = Prove di Media]

There are only a small number of these trials and they require the driver to get to the average speed and maintain it for the 5 to 10 minutes.

There are 1 -2 of these tests each day. They are up to 5km long and require competitors to average the nominated speed from the start to finish. You will start the test on instructions of a Marshall and your speed checked at secret locations anywhere during the prescribed distances specified.

- Average speed tests in the Targa Florio Australian Tribute are set as Maintained Average Speed (MAS).
- This means you are required to maintain the set speeds of the test throughout the distance of the test.
- These tests are set on quiet and less used open roads.
- Penalties for being slower or quicker are incurred.
- These are timed to 1/10 of a second.

Generally, there will be marshals at the start of these tests and then hidden marshals checking average speeds.
